

VARSHINI CHINTHA

chinthavarshini4@gmail.com | +91 7207893848 | Andhra Pradesh, India

[LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [HackerRank](#)

PROFESSIONAL SUMMARY

Final-year B.Tech student in Artificial Intelligence & Machine Learning (CGPA: 8.59) with strong foundations in object-oriented design, data structures & algorithms, and software engineering. Completed a technical internship at Infosys Springboard, contributing to end-to-end software development in a collaborative, agile environment. Proficient in Python and Java with hands-on experience building scalable, production-deployed applications. Actively practicing DSA on LeetCode and HackerRank. Passionate about designing innovative software solutions, solving complex problems at scale, and delivering customer-obsessed products — aligned with Amazon's leadership principles.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript (ES6+), HTML5, CSS3

CS Fundamentals: Object-Oriented Design (OOP), Data Structures (Arrays, Linked Lists, Trees, Graphs, Hash Maps), Algorithms (Sorting, Searching, Recursion, Dynamic Programming), Complexity Analysis (Big-O)

Software Engineering: Agile/Scrum, SDLC, system design basics, REST API design & integration, debugging & testing, code reviews, performance optimization

AI/ML & Data: Scikit-learn, TensorFlow (basics), CNN, NLP, OCR, data preprocessing, model training & evaluation, distributed data handling

Databases & Cloud: MongoDB (Certified), SQL basics, Microsoft Azure (AI-900 Certified), Git, GitHub, Render (cloud deployment)

PROFESSIONAL EXPERIENCE

Software Development Engineering Intern | Infosys Springboard

Nov 2025 – Jan 2026

- Collaborated with cross-disciplinary engineering team to design, develop, and deliver an end-to-end AI application — contributing across the full software development lifecycle in an agile environment
- Designed and implemented scalable Python and Java-based solutions for data processing and model integration, improving system accuracy by ~15% through algorithmic optimization
- Applied object-oriented design principles and data structure knowledge to write clean, efficient, and maintainable code; participated in structured code reviews
- Handled ambiguous problem statements independently — analyzed requirements, proposed solutions, and executed with minimal guidance from senior engineers
- Debugged and resolved complex technical issues across development and testing environments; documented solutions for team knowledge sharing
- Delivered all project modules on time in a fast-paced agile environment, demonstrating strong ownership and bias for action

PROJECTS

Women Safety & Empowerment App — Production-Deployed Full Stack System | [GitHub](#) / [Live Demo](#)

- Designed and built a production-deployed, scalable web application with real-time GPS data processing, REST API integration, and automated emergency alert dispatch — handling concurrent user requests reliably
- Architected the system using OOP principles with modular, fault-tolerant components — ensuring high availability and consistent performance under real-world conditions
- Implemented efficient data flow: user trigger → location capture → API call → contact notification — with low-latency response critical for emergency use cases
- Deployed on Render cloud platform (publicly accessible); used Git version control with structured commits throughout the development lifecycle
- Delivered as a hackathon project — designed, built, and shipped a complete working product under tight deadlines, demonstrating delivery under ambiguity

Intelligent Recipe Generator — Distributed AI Processing System

- Architected a multi-component AI system processing structured and unstructured data inputs through CNN, NLP, and OCR modules — demonstrating distributed, multi-tiered system design

- Designed efficient data structures and algorithms for ingredient classification achieving ~85% accuracy; optimized processing pipeline reducing latency by ~60%
- Applied complexity analysis to select appropriate algorithms for each processing stage — balancing accuracy, speed, and scalability
- Built with modular OOP architecture enabling independent testing, optimization, and scaling of each system component

Library Management System — Scalable Java Data System | [GitHub](#)

- Designed and implemented a Java-based data management system using OOP, Collections framework, and Exception Handling — managing 500+ records with $O(\log n)$ search operations
- Optimized CRUD operations using appropriate data structures (HashMaps, ArrayLists) reducing manual processing time by ~70%
- Wrote clean, well-documented code following software engineering best practices; version controlled via Git

EDUCATION

B.Tech – Artificial Intelligence & Machine Learning | Sri Vasavi Engineering College,
Tadepalligudem, AP 2023 – 2027
CGPA: 8.59 / 10.0

Intermediate (12th Grade) | Aditya Junior College, Palakol, AP 2021 – 2023
Score: 98.1%

DSA PRACTICE & COMPETITIVE PROGRAMMING

- LeetCode — actively solving problems in Arrays, Strings, Linked Lists, Trees, Dynamic Programming, and Recursion
- HackerRank — Python and Java problem solving challenges with verified skill badges
- GeeksforGeeks — data structures, algorithm design, and complexity analysis practice

CERTIFICATIONS

- Microsoft Azure AI Fundamentals (AI-900) — cloud computing & distributed systems [\[View\]](#)
- MongoDB Certified Associate Atlas Administrator — database & scalable storage [\[View\]](#)
- Salesforce Certified Agentforce Specialist (AI-201) [\[View\]](#)

AMAZON LEADERSHIP PRINCIPLES ALIGNMENT

- Customer Obsession — built Women Safety App solving a real user problem, focused on reliability and ease of use under critical conditions
- Bias for Action — delivered complete, deployed projects within hackathon timelines and internship deadlines
- Learn and Be Curious — holds 3 industry certifications, actively practices DSA daily, constantly exploring new AI/ML technologies
- Deliver Results — improved model accuracy by 15%, reduced processing time by 60-70% across multiple projects with measurable outcomes
- Dive Deep — applies complexity analysis, algorithm selection, and OOP design principles to every technical solution
